Hiring Manager
American Express

Re: Engineer – Technology Enterprise Data Management & Full-Stack Development

Dear Hiring Manager,

I am writing to express my strong interest in the Engineer role focused on Technology Enterprise Data Management at American Express. As a Full-Stack Developer with a solid foundation in scalable backend systems, RESTful API design, NoSQL/relational databases, CI/CD pipelines, and Agile delivery, I am excited by the opportunity to contribute to Amex's data management strategy and engineering excellence.

In my current role at Grest, I build and maintain MERN stack features — including REST APIs with JWT authentication and MongoDB schema design — while also resolving production issues across the full stack to improve performance and deployment stability. Previously at AGBE India, I delivered Angular-based e-commerce admin dashboards in an Agile/Scrum environment, collaborating on code reviews and iterative feature delivery. At Cosmoon Media, I developed a Next.js platform integrated with a headless CMS, leveraging SSR/SSG for performance-optimized, cross-device content delivery.

On the architecture side, I have independently designed and documented a comprehensive system design project covering a Product Requirements Document (PRD), Low-Level Design for microservices, RBAC policy-driven authorization, Redis-style caching strategies, CI/CD pipeline flows with environment separation, and failure handling with service isolation — all areas directly aligned with Amex's focus on scalable, reliable data engineering infrastructure.

My hands-on experience with MongoDB, PostgreSQL, Supabase, Firebase, Docker (basics), Git, and Vercel, combined with exposure to microservices architecture and observability principles, positions me well to contribute to Amex's data fabric initiatives. I also co-authored an IEEE conference paper evaluating deep learning models for healthcare, demonstrating my ability to approach complex problems with analytical rigour and research-level thinking.

I hold a Master of Computer Application from Birla Institute of Technology, Mesra (CGPA: 8.1, 2025), and I am a fast learner who thrives in fast-paced, high-ownership environments — qualities I believe align well with Amex's culture of innovation and accountability.

I would welcome the opportunity to discuss how my skills and experience can contribute to your team. Please find my resume attached for your review. Thank you for your time and consideration.

Warm regards,

Harsh Kumar Mehta
