HARSH KUMAR MEHTA

Senior Full Stack Engineer — React / Next.js · Node.js / TypeScript

harshmehta0519@gmail.com | +91 9988331757 | Gurugram / Delhi NCR, India

Portfolio: harshbuilds.vercel.app | LinkedIn: linkedin.com/in/harsh-mehta-0a99632a4

PROFESSIONAL SUMMARY

Full Stack Engineer with 3 years of experience designing, building, and owning production web applications end to end — from React/Next.js frontends to Node.js/TypeScript services, databases, and cloud infrastructure. Track record of shipping secure, high-ownership features in small teams: government and third-party API integrations, RBAC/JWT auth, and measurable performance gains. Hands-on integrating Generative AI / LLM APIs (OpenAI, Anthropic, Gemini) into real product features, and comfortable making pragmatic architectural calls, reviewing code, and mentoring peers.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router, SSR/SSG/ISR), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, SASS/SCSS, Responsive UI, Core Web Vitals

Backend: Node.js, Express.js, REST & GraphQL APIs, JWT Auth, RBAC, webhooks, serverless/edge functions, third-party integrations

Generative AI / LLMs: OpenAI, Anthropic (Claude), Google Gemini APIs; prompt engineering, streaming, function/tool calling, RAG, embeddings & vector search

Databases: MongoDB (schema/data modeling, indexing, aggregation, query optimization), PostgreSQL, MySQL, SQL tuning, TypeORM

Cloud & DevOps: AWS, GCP, Vercel, Docker, CI/CD (GitHub Actions), production deployment, logging & monitoring

Practices & Tools: Git & code reviews, SOLID, clean code, Jest testing, Agile, performance profiling; AI dev tooling (Claude Code, Cursor)

Languages: JavaScript (ES6+), TypeScript, Python, SQL

PROFESSIONAL EXPERIENCE

Full Stack Engineer (React / Next.js · Node.js / TypeScript) — Grest **Mar 2026 – Present**

- Own architecture and delivery of Grest TradeIn, a device trade-in platform with Government of India integration for device/IMEI verification — React frontend, Node.js/Express REST APIs over MongoDB, deployed on AWS.
- Built secure, auditable verification and status-tracking workflows with JWT auth, input validation, retries, and idempotency across government and third-party integrations.
- Integrated Generative AI / LLM APIs (OpenAI, Anthropic) for content generation, product enrichment, and automation behind clean Node.js services with streaming responses.
- Improved application performance through profiling and optimization — PageSpeed desktop 34→75, mobile 31→55.
- Built Python automation and data pipelines for scraping, cleanup, and bulk catalog updates, cutting manual effort by ~90%.
- Maintain and extend the Shopify storefront — Admin REST/GraphQL integrations, pricing, and webhooks driving the trade-in flow.
- Led a team of 5 interns — assigning tasks, reviewing code, and mentoring on architecture and clean-coding standards to ship production features.

Full Stack Developer (React / Node.js / TypeScript) — AGBE India **Apr 2025 – Mar 2026**

- Go-to engineer on a small team — built e-commerce admin dashboards and data workflows for products, orders, and users on a reusable, responsive React component architecture.
- Developed Node.js/Express REST APIs, integrated third-party services, and implemented filters, pagination, and functional tests for critical flows.
- Drove code reviews and remediated production defects, improving reliability and maintainability while keeping delivery moving.

Full Stack Developer (React / Next.js) — Cosmoon Media **Jan 2024 – Mar 2025**

- Built responsive, performance-optimized web applications with Next.js using SSR/SSG rendering strategies for SEO-critical pages.
- Improved page-load performance through code-splitting, dynamic imports, and caching; delivered scalable, component-driven frontend architecture for dynamic content platforms.

PROJECTS

Arcus Dashboard — Full Stack (React · Node.js · MongoDB/PostgreSQL)

- Role-based dashboard with RBAC and JWT authentication, protected routes, and error boundaries for graceful failure handling; secured REST APIs with automated tests and CI/CD.
- Designed a modular, independently deployable frontend aligned with micro-frontend principles, with caching to reduce API response times.

AI Assistant / LLM Integration — Next.js + Node.js

- Chat-style assistant with streaming responses, function/tool calling, and RAG over a document store using embeddings and vector search.
- Provider-agnostic layer to swap OpenAI, Anthropic, and Gemini models; handled rate limits, retries, and token/cost tracking for robust production behavior.

EDUCATION

Master of Computer Applications (MCA) — Birla Institute of Technology, Mesra · 2025 · CGPA 8.1
Bachelor of Computer Applications (BCA) — Guru Gobind Singh Indraprastha University (GGSIPU) · 2023 · CGPA 9.33

ADDITIONAL

IEEE Publication (2024): Deep Learning for Heart Disease Detection — built and evaluated Python deep-learning models; owned data preprocessing, feature engineering, and model evaluation.

Strengths: End-to-End Ownership · Architectural Judgment · Pragmatism over Perfectionism · Code Reviews & Mentoring · Remote-First Communication · Problem Solving.
