SUMMARY

Backend-focused Software Engineer with 2+ years shipping production systems for consumer-facing products. Deep hands-on expertise in Node.js and Express — designing and scaling high-traffic REST services, owning data modelling and schema design across SQL (PostgreSQL, MySQL) and NoSQL (MongoDB), and optimizing queries under real load. Comfortable owning systems end-to-end: architecture, third-party API integrations, production debugging, and monitoring. Uses AI coding tools aggressively as a force multiplier to ship meaningful surface area on a lean team.

TECHNICAL SKILLS

Backend (Primary): Node.js, Express.js, REST API design, JWT Auth, RBAC, Microservices, Webhooks
Languages: JavaScript (ES6+), TypeScript, Python, SQL
Databases: PostgreSQL, MySQL (Relational), MongoDB (NoSQL) — Data Modelling, Schema Design, Indexing & Query Optimization
Architecture: Distributed Multi-Tiered Systems, Caching, System Design, API Security, Rate Limiting, Service Isolation
Cloud & Tools: GCP (Cloud Storage, Firebase, BigQuery), Docker, Git, CI/CD, Postman, Vercel
AI Tooling: Claude Code, Cursor, LLM-assisted development, agentic workflows for coding & automation
Frontend (Working): React.js, Next.js, Tailwind CSS

EXPERIENCE

Full Stack Developer (Node.js + MERN) — Grest
Mar 2026 – Present

- Design and maintain REST APIs on a distributed, multi-tiered Node.js/Express backend powering a live consumer e-commerce platform serving daily traffic
- Own MongoDB (NoSQL) and relational schema design; optimized indexes and queries to cut key endpoint response times and support growing catalog scale
- Integrated third-party APIs — pricing, inventory, payment and webhook flows — with retry, idempotency, and failure handling
- Built Python automation pipelines for competitor price scraping and bulk catalog updates, cutting manual effort by ~90%
- Implemented JWT-based authentication and role-based access control (RBAC) across services
- Monitor, debug, and resolve production incidents end-to-end, ensuring an uninterrupted customer experience
- Use AI coding tools (Claude Code, Cursor) daily to ship features and refactors faster on a lean team

Full Stack Developer — AGBE India
Apr 2025 – Mar 2026

- Built internal ops and admin tooling — dashboards for products, orders, and users — backed by relational databases
- Designed data workflows with filters, pagination, and reporting queries over PostgreSQL/MySQL
- Integrated third-party APIs, built reusable service modules, and wrote functional tests for critical flows
- Debugged and remediated production defects, improving system reliability

Full Stack Developer (Next.js) — Cosmoon Media
Jan 2024 – Mar 2025

- Built responsive, performance-optimized consumer web applications with Next.js and Node.js APIs
- Improved page-load performance through caching and code-splitting; integrated backend services for dynamic content
- Delivered scalable frontend and API architecture for content-driven platforms

PROJECTS

Arcus Dashboard (Full Stack, Node.js)

- Built backend services in Node.js/Express with both PostgreSQL (relational) and MongoDB (NoSQL) data stores
- Designed a distributed microservices architecture with independently scalable, multi-tiered services and caching to reduce API latency
- Implemented RBAC, JWT authentication, CI/CD pipelines, and automated API tests; planned failure handling and monitoring

Price Intelligence Engine (Node.js + Python)

- Built a service that scrapes, normalizes, and stores live competitor pricing into a relational database
- Exposed cleaned data through REST APIs with scheduled jobs for automated daily updates

EDUCATION

Master of Computer Applications (MCA)
Birla Institute of Technology, Mesra — 2025 | CGPA: 8.1

Bachelor of Computer Applications (BCA)
Guru Gobind Singh Indraprastha University (GGSIPU) — 2023 | CGPA: 9.33

RESEARCH

IEEE Publication (2024) — Deep Learning for Heart Disease Detection

- Built and evaluated Python-based deep learning models; analyzed algorithmic performance and real-world applicability

SOFT SKILLS

End-to-End Ownership • Problem Solving • Production Debugging • Collaboration with Product & Business Teams • Bias for Shipping • Adaptability
