SUMMARY

Full-stack software developer (3+ years) with end-to-end ownership of production web platforms, real-time services, and cloud infrastructure. Strong across the MERN stack (React.js/Next.js, Node.js/Express) and Python backends (Flask/FastAPI/Django), building REST and WebSocket APIs, secure authentication, and data-driven dashboards. Hands-on with real-time and device-facing systems — socket-based communication, streaming responses, and mobile/edge apps for asset-security use cases — plus DevOps: Docker, CI/CD, and monitoring on AWS. Comfortable leading technical execution, defining architecture, reviewing code, and mentoring peers. Backed by an applied-ML research background (IEEE publication).

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL; working knowledge of Go & Java
Frontend: React.js, Next.js (SSR/ISR), Vue.js, Redux Toolkit, Tailwind CSS, responsive UI/UX
Backend & Architecture: Node.js, Express.js, Python (Flask, FastAPI, Django), REST APIs, microservices, modular/scalable system design
Real-Time & IoT: TCP sockets, WebSocket, MQTT, streaming responses; video streaming (RTSP / FFmpeg / WebRTC); edge/mobile device apps
Databases: PostgreSQL, MySQL, MongoDB, Redis; data integrity, indexing & caching, backups
DevOps & Cloud: Docker, Kubernetes, CI/CD (GitHub Actions, GitLab CI, Jenkins), Terraform; AWS (EC2, S3, Cognito, IAM), GCP
Observability & Security: Prometheus, Grafana, New Relic; JWT/secure auth, rate limiting, encryption, security hardening & audits
Leadership & Tooling: Architecture & API documentation, code reviews, mentoring, Agile/Scrum; Git, Postman, Swagger

EXPERIENCE

Full Stack Developer — Grest
Mar 2026 – Present

- Own end-to-end development of a live consumer platform — architected a monolithic Next.js/React frontend backed by Go (Golang) microservices alongside Node.js/Python services, exposing clean, documented REST and streaming APIs
- Built real-time, streaming, and IoT device-facing integrations behind scalable Golang microservices, improving responsiveness and throughput
- Designed and optimized MongoDB data models (with PostgreSQL where relational) plus Redis caching, cutting data-fetching latency and ensuring integrity
- Implemented DevOps workflow — Dockerized services, GitLab CI/CD pipelines, and monitoring on AWS — and improved observed performance (PageSpeed desktop 34→75, mobile 31→55)
- Led technical decisions, reviewed peers' code, and authored architecture/API documentation; built Python automation cutting manual effort ~90%

Software / Full Stack Developer — AGBE India
Apr 2025 – Mar 2026

- Built admin dashboards and data workflows (products, orders, users) with a reusable, component-based architecture supporting ERP-style modules
- Containerized services with Docker, integrated third-party APIs, and set up logging, health checks, and alerting for critical flows
- Wrote functional/integration tests and reviewed peers' code within Agile ceremonies, reducing post-deployment defects and improving reliability

Software Engineer (Next.js) — Cosmoon Media
Jan 2024 – Mar 2025

- Built and deployed responsive, performance-optimized web applications using Next.js and modern JavaScript
- Integrated backend services and improved page-load performance through caching, code-splitting, and automated build/deploy steps

PROJECTS

IVS — Secure Mobile Backend (Node.js + AWS)

- Designed a production REST API for a security-focused mobile app: mobile+OTP auth, KYC, and JWT with refresh tokens over MongoDB
- Hardened the service with Helmet, rate limiting, and input validation; integrated AWS Cognito and S3, and shipped Swagger API docs and Jest test coverage

Theft Verification — Asset-Security App (Capacitor + React)

- Built a cross-platform mobile app for verifying and securing goods, with image capture, S3 storage, and a documented backend contract

Arcus — Multi-Tenant Admin Platform (Next.js + PostgreSQL)

- Architected a modular, multi-tenant control plane with tenant provisioning and fine-grained authorization — Casbin RBAC/ABAC, JWT (JWKS), and bcrypt over PostgreSQL (TypeORM) with Redis caching
- Built the DevOps and quality pipeline: Docker/docker-compose, GitHub Actions CI, and unit + integration + end-to-end test coverage (Vitest, Playwright)

RESEARCH

IEEE Publication (2024) — Deep Learning for Heart Disease Detection

- Built and evaluated Python deep learning models; owned data preprocessing, feature engineering, and model evaluation

EDUCATION

Master of Computer Applications (MCA)
Birla Institute of Technology, Mesra — 2025 | CGPA: 8.1

Bachelor of Computer Applications (BCA)
Guru Gobind Singh Indraprastha University (GGSIPU) — 2023 | CGPA: 9.33

SOFT SKILLS

Technical Leadership • End-to-End Ownership • Mentoring & Code Reviews • Cross-Team Collaboration • Clear Communication
