SUMMARY

Full-stack engineer with 3+ years building and owning web applications end to end — frontend, backend, and the infrastructure that runs them — in small, high-ownership teams. Language- and tool-agnostic by habit: I pick what fits the problem rather than defend a stack, and I've shipped across React/Next.js, Node.js/Express, and TypeScript, with hands-on time in AWS, Docker, and CI/CD. Comfortable being the person who makes the architectural call, spots over-engineering early, and reasons about the long-term trade-offs of a design instead of gold-plating it. I treat engineering decisions as trade-offs in service of the customer problem — measuring, shipping the pragmatic solution, and iterating. Experienced building secure, auditable systems with government and third-party integrations, JWT auth, and production monitoring; naturally aligned with a compliance and trust-focused product. Fully remote by default: I write things down, communicate openly, and move fast without moving alone.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router, SSR/ISR), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Responsive UI, accessibility
Backend: Node.js, Express.js, RESTful & GraphQL API design, JWT / OAuth auth & API security, webhooks, third-party & native integrations, background jobs
Databases: MongoDB (schema/data modeling, indexing, aggregation, query optimization); PostgreSQL, MySQL, SQL performance tuning
Infrastructure & DevOps: AWS / GCP, Docker, Vercel, CI/CD (GitHub Actions), production deployment, logging, monitoring & incident response
Architecture: service & API design, trade-off analysis, avoiding premature optimization, scalability & reliability, secure/auditable systems
Ways of working: Git & code review, technical leadership, remote-first written communication, Agile, cross-functional collaboration
Languages: JavaScript (ES6+), TypeScript, Python, SQL

EXPERIENCE

Full Stack Engineer — Grest
Mar 2026 – Present

- Designed and shipped **Grest TradeIn** end to end — React frontend, Node.js/Express APIs over MongoDB, deployed on **AWS** — moving across frontend, backend, and infra as the work demanded rather than staying in one layer
- Owned architectural decisions for the verification pipeline, including a **Government of India integration** for device/IMEI checks; made pragmatic trade-offs on where to add caching, retries, and idempotency instead of over-building
- Built secure, auditable workflows with JWT auth, idempotent operations, and status tracking — the kind of controls a compliance-minded product depends on
- Modeled MongoDB collections for devices, verification jobs, and order state; added indexing and aggregation to keep queries fast under production load
- Maintain and extend the **Shopify** storefront via Admin REST/GraphQL integrations, pricing logic, and webhooks driving the trade-in flow
- Improved application performance through profiling — PageSpeed desktop 34→75, mobile 31→55 — and ship features on AWS via CI/CD, supporting production issues alongside product and design

Full Stack Developer — AGBE India
Apr 2025 – Mar 2026

- Acted as go-to engineer for a small team — built admin dashboards and data workflows for products, orders, and users on a reusable, responsive React component architecture
- Developed Node.js/Express REST APIs over MongoDB, integrated third-party services, and added filters, pagination, and functional tests for critical flows
- Drove code reviews and remediated production defects, improving reliability and maintainability while keeping delivery moving

Full Stack Developer (React / Next.js) — Cosmoon Media
Jan 2024 – Mar 2025

- Built responsive, performance-optimized applications with React/Next.js and modern JavaScript (ES6+) / TypeScript, integrating Node.js backend services
- Improved page-load performance through caching and code-splitting, balancing effort against measurable user impact

PROJECTS

Arcus Dashboard (Full Stack — React / Node.js / MongoDB)

- Role-based dashboard with **RBAC** and JWT authentication; secured REST APIs, automated API tests, and CI/CD for reliable deployments — access-control patterns that map directly to compliance/trust tooling

AI Assistant / LLM Integration (React + Node.js)

- Built a chat-style assistant with streaming responses and a clean service layer over third-party provider APIs; handled rate limits, retries, and error handling for robust production behavior — the same integration discipline behind AI-driven automation

EDUCATION

Master of Computer Applications (MCA)

Birla Institute of Technology, Mesra — 2025 | CGPA: 8.1

Bachelor of Computer Applications (BCA)

Guru Gobind Singh Indraprastha University (GGSIPU) — 2023 | CGPA: 9.33

ADDITIONAL

IEEE Publication (2024) — Deep Learning for Heart Disease Detection (Python, model evaluation)

SOFT SKILLS

End-to-End Ownership • Architectural Judgment • Pragmatism over Perfectionism • Business-Aware Trade-offs • Remote-First Communication • Problem Solving
